

MODEL NO.: AT-205P			WI-ENG-529		
title: DCA calibration			NO		
			1		
3	A	0	2003/11/22	2	

instruction:

1 set to range DCuA use a standard calibrator to input 100uA,  
it's normal that LCD displays: 99.2 100.8uA.

2 input 1000uA, it's normal that LCD display 988 1012uA.

3 set to range DCmA input 10.0mA  
it's normal that LCD displays: 9.88 10.12mA.

4 set to range DCmA input 100mA  
it's normal that LCD displays: 98.8 101.2mA.

5 set to range DCA, input 1A  
it's normal that LCD displays: 0.985 1.015A.

			2003/11/22	2	

**instruction:**

1 set to uA, press MODE BUTTON to enter AC function, LCD display AC, use a standard unit to input 100uA 60Hz , normal value displayed on LCD should be: AC 98.8 101.2uA;

2 set to range ACuA, input 1000uA 60Hz , normal value displayed on LCD should be: AC 985 1015uA;

3 set to range mA, press MODE button, input 10.0mA 60Hz normal value displayed on LCD should be: AC 9.85 10.15mA ;

4 set to range ACmA, input 100mA 60Hz normal value displayed on LCD should be: AC 98.5 101.5mA ;

5 set to range A, press MODE button, input 1A 60Hz normal value displayed on LCD should be: AC 0.980 1.020A.

**instruction:**

1 calibration: place the unit in constant temperature room for more than 4 hours;

A temperature compensation calibration---adjustor: VR4, calibration point: room temperature set to range , use a standard unit (model: 5101B) to input 0mV, adjust VR4, until LCD display: room temperature  $\pm 1$

B full range calibration--- input DC 31.124mV, adjust VR6 until LCD display: 750 + room temperature  $\pm 1$  ;

C linearity calibration:

input DC 4.095mV, normal value displayed on LCD should be: 100 + room temperature  $\pm 1$

2 calibration:

A set to range , input 0mV, adjust VR7, until LCD display: room temperature  $\pm 1$  , and at the same time, it should be corresponding to temperature, eg: when it's 25 , should be 77

B full range calibration:

input DC 31.124mV, LCD display: 1350 + room temperature ( )  $\pm 10$

C linearity calibration:

input DC 4.095mV, LCD display: 180 + room temperature ( )  $\pm 2$

instructions:

1 place the meter in a constant temperature room for more than 4hours;

2 set to range insert the temp. probe, adjust VR4, until LCD

display same value as the standard unit displayed, said it's room temperature; adjust VR4

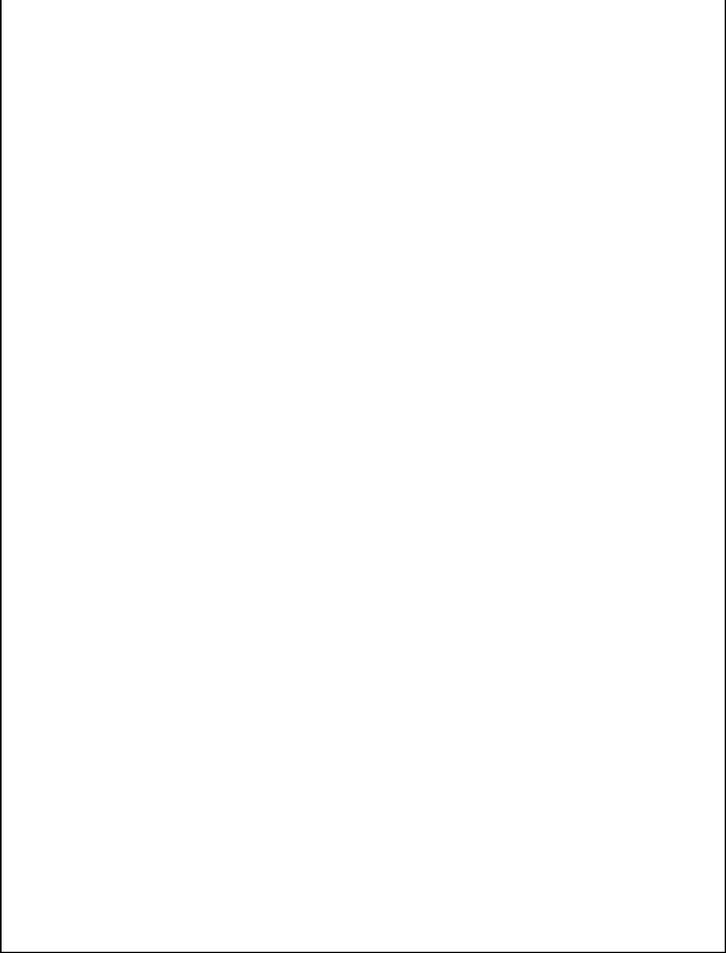

until lower right LCD display same temperature as the standard unit displayed;

3 set to range , adjust VR7 until LCD display same value as

standard unit displays, and should be corresponding to temperature, eg: if at 25 , should be 77 .

400k $\Omega$	100.0k $\Omega$	99.2 100.8k $\Omega$
4M $\Omega$	1.000M $\Omega$	0.992 1.008M $\Omega$
40M $\Omega$	10.00M $\Omega$	9.85 10.15M $\Omega$

2 diode, buzzer calibration:

press MODE button to enter diode function, LCD displays Diode, V & OL icons

A diode calibration: LCD display diode positive voltage, display OL if reverse.

B buzzer calibration: press MODE button to enter buzzer range,

when connected resistance less than 50 $\Omega$ , buzzer sound.
