1. SAFETY PRECAUTIONS

1. The design of this product contains special hardware, many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the products should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the parts list of Service manual. Electrical components having such features are identified by shading on the schematics and by (!) on the parts list in Service manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the parts list of Service manual may cause shock, fire, or other hazards
4. Don't short between the LIVE side ground and ISOLATED (NEUTRAL) side ground or EARTH side ground when repairing. Some model's power circuit is partly different in the GND. The difference of the GND is shown by the LIVE: (---) side GND, ISOLATED (NEUTRAL) : (\perp) side GND and EARTH : (\oplus) side GND. Don't short between the LIVE side GND and ISOLATED (NEUTRAL) side GND or EARTH side GND and never measure with a measuring apparatus (oscilloscope etc.) the LIVE side GND and ISOLATED (NEUTRAL) side GND or EARTH side GND at the same time. If above note will not be kept, a fuse or any parts will be broken.
5. If any repair has been made to the chassis, it is recommended that the B1 setting should be checked or adjusted (See ADJUSTMENT OF B1 POWER SUPPLY).
6. The high voltage applied to the picture tube must conform with that specified in Service manual. Excessive high voltage can cause an increase in X-Ray emission, arcing and possible component damage, therefore operation under excessive high voltage conditions should be kept to a minimum, or should be prevented. If severe arcing occurs, remove the AC power immediately and determine the cause by visual inspection (incorrect installation, cracked or melted high voltage harness, poor soldering, etc.). To maintain the proper minimum level of soft X-Ray emission, components in the high voltage circuitry including the picture tube must be the exact replacements or alternatives approved by the manufacturer of the complete product.
7. Do not check high voltage by drawing an arc. Use a high voltage meter or a high voltage probe with a VTVM. Discharge the picture tube before attempting meter connection, by connecting a clip lead to the ground frame and connecting the other end of the lead through a $10k\Omega$ 2W resistor to the anode button.
8. When service is required, observe the original lead dress. Extra precaution should be given to assure correct lead dress in the high voltage circuit area. Where a short circuit has occurred, those components that indicate evidence of overheating should be replaced. Always use the
9. manufacturer's replacement components.
10. Isolation Check
(Safety for Electrical Shock Hazard)
After re-assembling the product, always perform an isolation check on the exposed metal parts of the cabinet (antenna terminals, video/audio input and output terminals, Control knobs, metal cabinet, screwheads, earphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.
11. The surface of the TV screen is coated with a thin film which can easily be damaged. Be very careful with it when handle the TV. Should the TV screen become soiled, wipe it with a soft dry cloth. Never rub it forcefully. Never use any cleaner or detergent on it.

(1) Dielectric Strength Test

The isolation between the AC primary circuit and all metal parts exposed to the user, particularly any exposed metal part having a return path to the chassis should withstand a voltage of 3000V AC (r.m.s.) for a period of one second.

(...Withstand a voltage of 1100V AC (r.m.s.) to an appliance rated up to 120V, and 3000V AC (r.m.s.) to an appliance rated 200V or more, for a period of one second.)

This method of test requires a test equipment not generally found in the service trade.

(2) Leakage Current Check

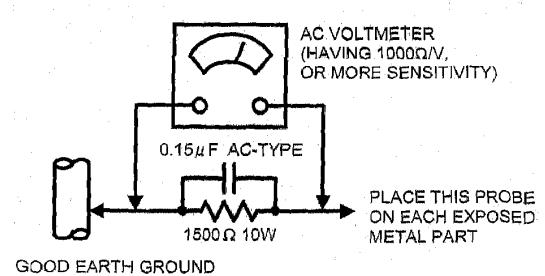

Plug the AC line cord directly into the AC outlet (do not use a line isolation transformer during this check.). Using a "Leakage Current Tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground (water pipe, etc.). Any leakage current must not exceed 0.5mA AC (r.m.s.).

However, in tropical area, this must not exceed 0.2mA AC (r.m.s.).

•Alternate Check Method

Plug the AC line cord directly into the AC outlet (do not use a line isolation transformer during this check.). Use an AC voltmeter having 1000 ohms per volt or more sensitivity in the following manner. Connect a 1500Ω 10W resistor paralleled by a $0.15\mu\text{F}$ AC-type capacitor between an exposed metal part and a known good earth ground (water pipe, etc.). Measure the AC voltage across the resistor with the AC voltmeter. Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75V AC (r.m.s.). This corresponds to 0.5mA AC (r.m.s.).

However, in tropical area, this must not exceed 0.3V AC (r.m.s.).
This corresponds to 0.2mA AC (r.m.s.)

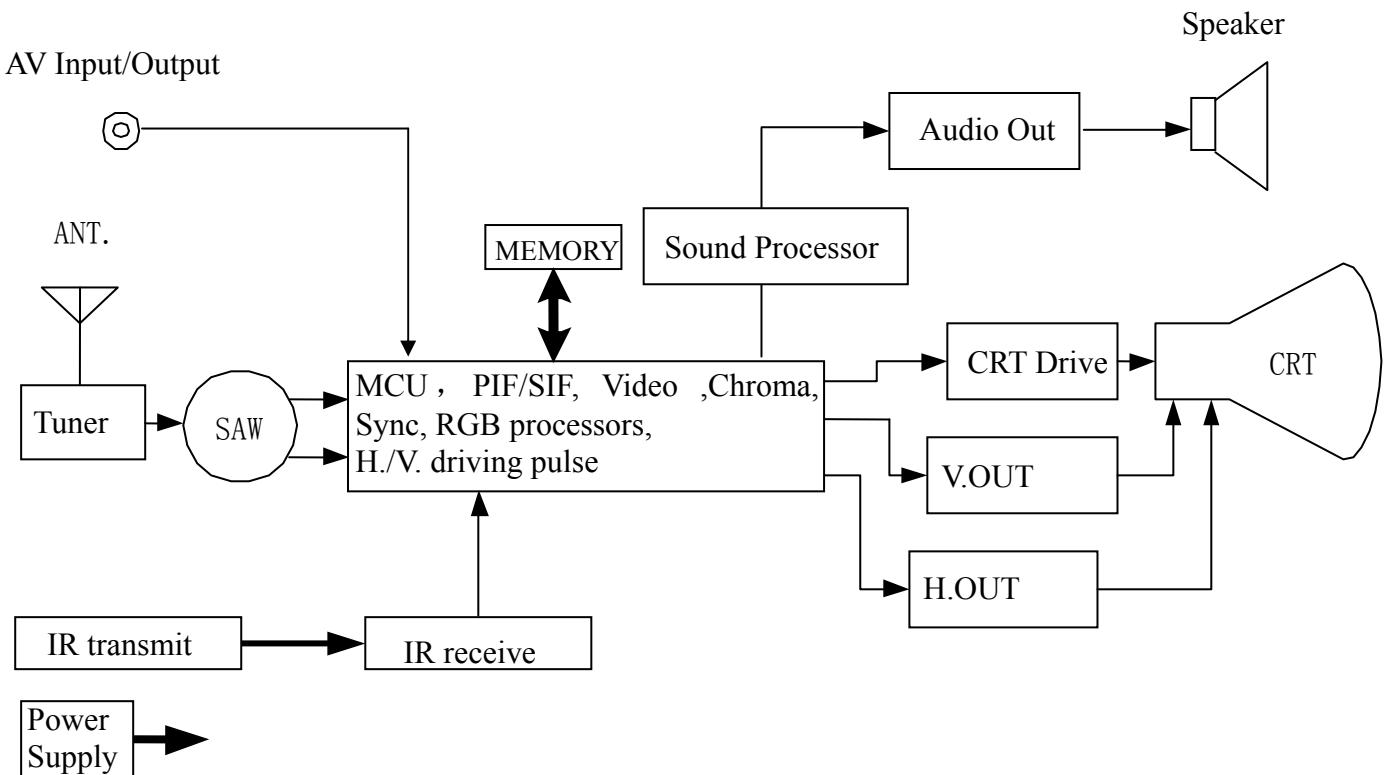

2.MCU and signal processor for a PAL/SECAM/NTSC TV

The A8897CPNG-6PN9 is an integrated circuit for a PAL/SECAM/NTSC TV. A MCU and a TV signal processor are integrated in a 64-pin shrink DIP package. The MCU contains 8-bit CPU, ROM, RAM, I/O ports, timer/counters, A/D converters, an on-screen display controller, remote control interfaces, IIC bus interfaces and the Closed Caption decoder. The TV signal processor contains PIF, SIF, Video, multi-standard chroma, Sync, RGB processors.

3. Definition of A8897CPNG-6PN9 Pin

NO.	Pin name	I/O	Function
1	BAND1/ EyeCare or X-ray	I/O	BAND data output 1 (VS) / EYECARE or X-ray (FS)
2	BAND2/Thermal resistance	Out	BAND data output 2 (VS) / Thermal resistance (FS)
3	KEY	I/O	Key input
4	VSS	-	GND connection
5	RESET	I/O	Reset signal input
6	XOUT	In	8 MHz oscillator connecting
7	XIN	Out	8 MHz oscillator connecting
8	TEST	In	GND connection
9	VDD	-	5V power supply
10	VSS	-	GND connection
11	TV DEF AGND	-	GND terminal for TV DEF block
12	FBP in	In	Input terminal for FBP
13	H out	Out	Output terminal for Horizontal driving pulse
14	HAFC 1	-	Terminal to be connected capacitor for H AFC filter
15	V saw	-	Terminal to be connected capacitor to generate Vsaw signal
16	V out	Out	Output terminal for Vertical driving pulse
17	AVcc(8V)	-	Vcc terminal for DEF,RGB,Audio out and PIF out circuit
18	TV A GND	-	GND terminal for TV block
19	Cb in	In	Input terminal for Cb signal
20	EW out	Out	output terminal for EWsignal
21	Cr in	In	Input terminal for Cr signal
22	Ext AU1 in	In	Input terminal for Audio1 signal 1
23	C/V3 in	In	Input terminal for Chroma or Video signal
24	Y/V2 in	In	Input terminal for Video signal2 or Y signal
25	ALC Filter	In	Terminal to be connected capacitor for ALC(Audio Level Control)
26	V1 in	In	Input terminal for Video signal.(Input leave = 1 Vp-p)
27	ABCL	In	Input terminal for ABL/ACL control
28	AU out1	Out	Output terminal 1 for Audio signal
29	AU out2	Out	Output terminal 2 for Audio signal
30	TV out/FM radio	Out	Output terminal for detected PIF signal or FM radio
31	SIF out	Out	Output terminal for 1bit DAC, detected SIF signal or audio monitor out 2.
32	Ext AU2 in	In	Input terminal for External Audio signal 1
33	H correct/SIF in	In	Input terminal for H correction and 2nd SIF
34	DC NF	Out	Terminal to be connected capacitor for DC Negative Feedback from SIF Det output
35	PIF PLL	-	Terminal to be connected with loop filter for PIF PLL.This terminal voltage is controlled PIF VCO frequency.
36	IF Vcc 5V	-	Vcc terminal for IF circuit. Supply 5V.
37	Reg Fil	-	Terminal to be connected capacitor for stabilizing internal bias.
38	AU monitor out1		Output terminal for External Audio signal or TV audio signal selected by BUS(Audio SW)
39	IF AGC	-	Terminal to be connected with IF AGC filter.
40	IF GND	-	GND terminal for IF circuit.
41	IF in	In	Input terminals for IF signals.
42	IF in	In	Input terminals for IF signals.
43	RF AGC		Output terminal for RF AGC control level.
44	Black Det	-	Terminal to be connected with Black Det filter for black stretch.
45	SVM/Monitor		Output terminal for monitor function. Also output terminal for SVM signal selectable through IIC bus.
46	APC Filter		Terminal to be connected with APC filter for chroma demodulation.
47	YC Vcc 5V		Vcc terminal for Y/C circuit
48	EHT in	In	EHT input
49	DVCC		Vcc terminal for digital block
50	R out	Out	Output terminal for R signal.
51	G out	Out	Output terminal for G signal.
52	B out	Out	Output terminal for B signal.
53	TV DGND	-	GND terminal for digital block.
54	up AGND	-	GND for Oscillator circuit

55	up AVDD	-	Vdd for Oscillator circuit Supply 5V
56	VIDEO1/2	Out	TV=0,AV1=OPEN, AV2=5V
57	SDA1	I/O	IIC-BUS SDA1
58	SCL1	I/O	IIC-BUS SCL1
59	50/60Hz control	I/O	50/60Hz
60	PWM	I/O	PWM
61	MUTE	I/O	MUTE
62	H.SYNC	I/O	Horizontal sync signal input
63	REMOTE	I/O	Remote controller signal input
64	POWER	I/O	Power control & Check, On=Hi-Z(input), Off=L(output)

5.Service Controlled Function

The Service mode is entered by pressing the “D-MODE ON/OFF” key when the TV is in ON condition, “D” is displayed on the screen. Press the “P+ / P-” key to select item. Press the “V+ / V-” key to adjustment value. Press the “POWER” key to exit Service mode.

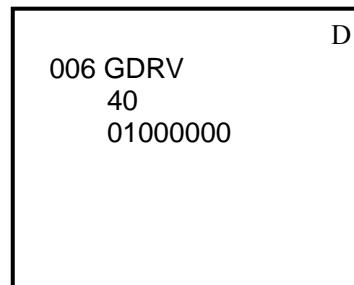

Note:How to use user remote enter Service mode?

- a) Press “V-” key of TV set to set volume into ‘00’, hold this key ,and press “Call” key. “S” is displayed on the screen.(The TV set as been into Service-MODE)
- b) Press “Call” key again. The ‘S’ disappear. Press “V-” key of TV set to set and hold this key ,then press “Call” key. “D” is displayed on the screen.(The TV set as been into Design-MODE)

(1)White balance adjustment

The items within the White Balance mode can be accessed using “Item up” (\uparrow)/ “Item down” (\downarrow) keys and the selected item value is modified using “Value+” (\rightarrow)/ “Value-” (\leftarrow) keys. The parameters controlled in the White Balance menu are:

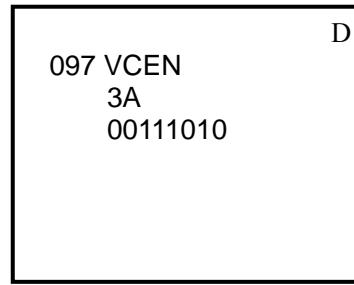

- a)Press the  key to set the screen into a horizontal line. Turn the “Screen” varactor resistor of the FBT to the horizontal line just appear.
- b)RCUT + : Red cut-off value increase
- c)RCUT - : Red cut-off value decrease
- d)GCUT +: Green cut-off value increase
- e)GCUT -: Green cut-off value decrease
- f)BCUT +: Blue cut-off value increase
- g)BCUT -: Blue cut-off value decrease
- h)Press the  key again to return to the normal picture.
- i)GDRV -: Green drive
- j) \rightarrow : value increase
- k) \leftarrow : value decrease
- l)BDRV +: Blue drive
- m) \rightarrow : value increase
- n) \leftarrow : value decrease

(2)Picture and AGC service adjustment

The items within the Picture mode can be accessed using “Item up” (\uparrow)/ “Item down” (\downarrow) keys and the selected item value is modified using “Value+” (\rightarrow)/ “Value-” (\leftarrow) keys. The parameters controlled in the Picture menu are:

- a).VCEN: 50Hz VERTICAL PHASE
- b).HPOS: 50Hz HORIZONTAL PHASE
- c).VP50: 50Hz VERTICAL PHASE fine adjustment
- d).HIT: 50Hz VERTICAL AMPLITUDE
- e).HITZ: 50Hz ZOOM VERTICAL AMPLITUDE
- f).HITW: 50Hz WIDE VERTICAL AMPLITUDE
- g).VLIN: 50Hz VERTICAL-LINEARILTY

- h) VSC: 50Hz VERTICAL-S CORRECTION
- i) EWP: 50Hz EW Parabola correction adjustment
- j) EWPZ: EW Parabola correction adjustment at ZOOM mode
- k) EWPW: EW Parabola correction adjustment at WIDE mode
- l) EWT: 50Hz EW Trapeziums adjustment
- m) EWCT: 50Hz EW corner top adjustment
- n) ECB: 50Hz EW corner bottom adjustment
- o) WID: 50Hz EW Horizontal size adjustment
- p) HPS: 60Hz HORIZONTAL PHASE
- q) VP60: 60Hz VERTICAL PHASE
- r) HITS: 60Hz VERTICAL AMPLITUDE
- s) VLIS: 60Hz VERTICAL-LINEARILTY
- t) VSS: 60Hz VERTICAL-S CORRECTION
- u) EWPS: 60Hz EW Parabola correction adjustment
- v) EWTS: 60Hz EW Trapeziums adjustment
- w) WIDS: 60Hz EW Horizontal size adjustment
- x) AGC: Tuner AGC.

Note: Maybe some chassis vertical position can not adjustment to CRT center, you can adjustment VCEN item value.

36) PVHH/PVHL/PUHH/PUHL

FS Tuner band set

For example: Some Tuner band specification is:

L: 49.75-144.25 MHz(C1-Z5)/M:152.25-424.25 MHz(Z6 – Z33)/H:432.25-863.25 MHz(Z34 – C57)

PVHH/PVHL

{[(144.25+152.25)÷2+38]x32}=5960(algorism), change to hex is 1748, so PVHH=17 , PVHL=48
PUHH/PUHL

{[(424.25+432.25)÷2+38]x32}=14920(algorism), change to hex is 3A48, so PVHH=3A , PVHL=48

PVHH=17

PVHL=48

PUHH=3A

PUHL=48

2) Some skills of factory adjustment:

a) How to use Service Remote enter service mode?

Pressing the “D MODE ON/OFF” key. Press “D MODE ON/OFF” key again to exit service mode.

b) How to use User remote enter Service mode?

Press “MENU” → “6” → “4” → “8” → “3” key(within 6s) or press “V-“ key of TV set to set volume into ‘00’ , hold this key ,and press “Call” key.

c) In the S-mode,press the LOCK key can edit the LOGO

d) How to Direct select adjustment item?

Press Service Remote “D MODE ON/OFF” key to enter “D-MODE”.Then press user Remote Direct select key(0-9)

3) Keyboard input:
